```

{ Дефиниране на константата NewLine. Тук може да видите как нормалния синтаксис на Паскал се "чупи" с препроцесорните директиви. Когато компилирате за Unix (вкл. Linux, Android, Mac OS X), компилатора вижда това:

```
const NewLine = #10;
```

Когато компилирате за Windows, компилатора вижда това:

```
const NewLine = #13#10;
```

За други операционни системи, кодът няма да се компилира, защото компилатора вижда това:

```
const NewLine = ;
```

Хубаво е, че компилирането се проваля в този случай -- така ако трябва да

пригодите програмата към ОС, която не е Unix или Windows, компилатора ще ви припомни да изберете конвенция за нов ред (newline) за тази система. }
